*Introduction to*

# iPhone Application Programming

Interested in developing applications for the world's hottest smartphone? Want to expand your job possibilities? Ready to become an entrepreneur in the mobile industry?

## Course Description

This course will teach you how to write iPhone applications using Objective-C and the Cocoa Touch framework. The goal is to get you through the learning curve of iPhone development: to give you the confidence and knowledge you need to jump into the mobile industry.

Topics we will cover include:

- \* Objective-C
- \* Xcode and debugging
- \* Cocoa Touch View and Controller classes
- \* Interface Builder and application flow
- \* Fetching and storing data: disk, database, and web services

(This class is based on course materials by MIT.)
